

## **Glossary of *Little Wandle Letters and Sounds Revised* terminology**

### **Adjacent consonants**

Two or more consonants that come together in a word without any intervening vowel or vowels (for example, 'd-r' in 'drop', 's-t-r' in 'strap'). Adjacent consonants do not constitute a discrete unit of sound and are read by blending the individual consonant phonemes involved.

### **Alien words**

A child-friendly term for 'pseudo-words'.

### **Alternative pronunciation**

A different way of pronouncing a grapheme. For example, the letters 'ow' can represent the sounds /ow/ as in 'crown' and /oa/ as in 'snow'.

### **Alternative spelling**

A different way of spelling a phoneme. For example, the sound /w/ can be represented in writing by 'w' as in 'wave' and 'wh' as in 'what'.

### **Blend**

To combine individual phonemes into a whole word, working all the way through from left to right. Once the GPCs involved have been learned, blending is the key process involved in reading words effectively. It is a skill that needs extensive practice. Practice in oral blending is very helpful, both before and during the process of learning to read. It is important to understand that blending sounds into a word is not simply a matter of saying them more quickly, nor of mixing them together like paint. Phonemes need to be joined into one continuous stream of sound to make a spoken word. Extensive practice, following teacher modelling, is the key. An intermediary stage that can help children bridge the gap between sounding and blending aloud and doing the process silently 'in their head'.

### **Chunk it up**

To break up a longer word and read it one part (chunk) at a time, to avoid being overwhelmed and to ease the process of blending.

### **Compound word**

A word made by joining two individual words together, for example, 'houseboat' is 'house' + 'boat'.

---

## Digraph

A grapheme using two letters to represent one phoneme. With children, we frequently reinforce it with the mantra *'two letters, one sound'*. At the appropriate stage, it is useful for children to learn to use the term and to understand what it means.

## Formation phrase

A memorable phrase used to support the children in forming the letter correctly using directional vocabulary, such as 'down', 'up', 'across' and 'over'.

**Under the snake's chin, slide down and round its tail.**

## GPC

This stands for grapheme–phoneme correspondence, the sound–letter relationship between each element of the alphabetic code. Written English is quite complex and does not have one-to-one grapheme–phoneme correspondence. The same phoneme can be represented by different graphemes in different words, and the same grapheme can represent different phonemes in different words. To ensure learning is systematic, and to avoid cognitive overload, this programme generally teaches one fairly common grapheme representation of each phoneme first. Alternative spellings of the same phoneme, and alternative pronunciation of the same grapheme are usually taught later, mostly in Phase 5.

## Grapheme

A letter or group of letters used to represent a particular phoneme when writing. With children, we sometimes call this 'a sound written down', although, as with 'phoneme', it is helpful for children to learn to use the correct term from the beginning. The way graphemes are used to represent phonemes in our written language is known as the 'alphabetic code'.

## Group reading practice

A group reading session where the children read alongside an adult from books containing known GPCs and tricky words, and have the opportunity to apply and practise their knowledge. The children should be able to access these books with 90% accuracy. (Also known as 'teaching reading with books'.)

## Grow the code

To systematically and incrementally teach additional GPCs so that the range of words children can read continually extends.

## Homograph

Homographs are words that have the same spelling but different meanings, for example, 'pen' (writing implement) and 'pen' (animal enclosure).

## Homophone

Homophones are words that have the same pronunciation but different spellings or meanings, for example, 'prey' and 'pray'.

---

### **Mnemonic**

Any simple device used to assist memory. In this programme, it is a combination of an engaging picture with a letter and is used as a 'hook' to help children remember a particular GPC when they first learn it.

### **Multi-syllabic word**

A word with more than one syllable. Syllables are easy to recognise when words are spoken, but hard to distinguish in printed words until you know how to say them. The best way for children to learn to recognise syllables is to count (or clap) them when reciting known rhymes, songs, and so on.

### **Phoneme**

The smallest unit of sound that can be identified in words. We sometimes simply call this a 'sound', although it is helpful for children to use the term 'phoneme' from the beginning of our programme. (Note: We do not usually notice discrete sounds in words. We deliberately separate them out so that children can learn how our writing–reading system works. Children are first helped to identify the separate sounds in words through oral blending and segmenting, and this is reinforced as they begin to work through our systematic synthetic phonics programme.)

### **Point and sweep**

A technique for reinforcing the process of sounding and blending involving the teacher pointing to each phoneme in a word, in sequence from left to right, and then sweeping a finger below the word, again from left to right, to indicate the blending. It can be used with the teacher and/or children vocalising each stage, or as a reinforcement to silent sounding and blending as children become more confident.

### **Prefix**

A recognisable unit of language added to the beginning of a word to change its meaning. For example, 'rewrite' is 'write' with 're-' added at the beginning, so 're-' is the prefix. Examples of other common prefixes are 'un-', 'dis-', 'sub-'. Prefixes usually carry a particular meaning, whatever word they are applied to.

### **Prosody**

The rhythmic and intonational aspect of speech that manifests as expressive reading. It comprises timing, phrasing and intonation, and helps to convey meaning and add 'life' to reading.

### **Revisit and review**

The first part of the lesson where the core purpose is to activate prior knowledge – bringing prior learning to the forefront of the children's minds and promoting the transference of working memory into long-term memory.

### **Segment**

To identify each of the individual phonemes in a word, working all the way through from left to right. This is an important first stage of writing (spelling) a word but needs to be practised orally first. Counting the phonemes is often helpful in reinforcing this process.

### **Sound button**

A graphic device to help children recognise the separate phonemes in a printed word. Sound buttons can be used as a support in the early stages of learning. For each word, a dot is placed under any

---

single-letter grapheme and a short horizontal line under the group of letters that form a digraph or

trigraph, as shown below. **bird**

### Speedy sounds

The rapid recall of previously taught GPCs.

### Speedy words

Fluent reading of previously read words containing known GPCs that are read without blending.

### Split vowel digraph

A digraph representing a vowel sound where its two letters are split by an intervening consonant (for example, 'a\_e' in 'take'). Despite having a consonant in between them, the two letters involved (here 'a' and 'e') still count as one digraph, making one sound. The vowel sound is pronounced at the position of the first of the two letters of the digraph (that is, in the middle of 'take'). At early learning stages, a split digraph is often highlighted with a short line joining the two halves of the digraph above the intervening

consonant, as shown below. **take**

### Suffix

A recognisable unit of language added to the end of a word to change its form, such as the tense of a verb. For example, 'playing' is 'play' + '-ing', so '-ing' is the suffix. Examples of other common suffixes are '-er', '-ed', '-est'.

### Tricky words

High-frequency words that, although decodable in themselves, cannot be decoded by children using the GPCs they have been taught up to that point. Not all high-frequency words are 'tricky words'. Many tricky words cease to be tricky in the later stages of our programme, as more GPCs are learned.

### Trigraph

A grapheme using three letters to represent one phoneme. With children, we frequently reinforce it with the mantra *'three letters, one sound'*. At the appropriate stage, it is useful for children to learn to use the term and to understand what it means.

### Vowel sound

Although we have five vowel letters in English, each one can be pronounced in different ways and there are, therefore, far more than five vowel phonemes (vowel sounds). Each one has a short vowel form, with a fairly staccato pronunciation; these are the vowel sounds heard, for example, in 'hat', 'bed', 'big', 'hot' and 'tub'. Each also has a more elongated pronunciation, the long vowel form heard, for example, in 'play', 'seed', 'high', 'blow' and 'tube'. There are, additionally, more complex vowel forms, for example, those heard in 'bear' and 'farm'. Graphemes for short vowel phonemes are the easiest to learn and are taught first. Most GPCs for long vowels involve digraphs or trigraphs and are taught later, generally in Phase 5.
